

TARGET PESTS AND DISEASES AT THE SOURCE

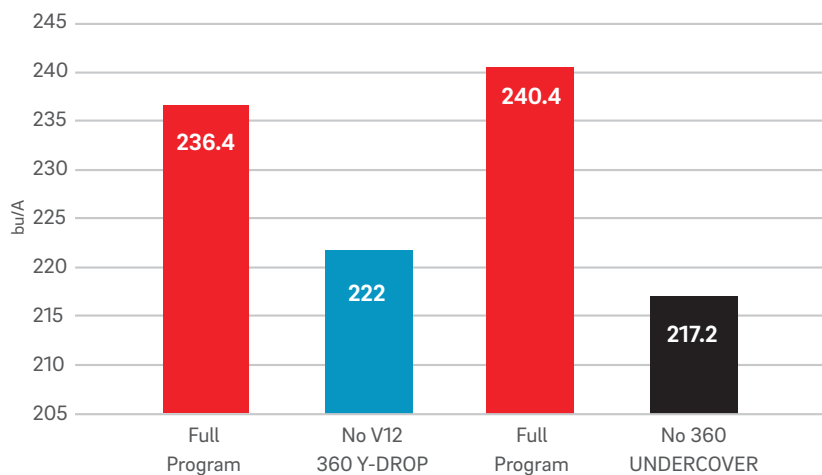

Many diseases and insects originate from the root of the plant and work their way up the canopy. Traditional application methods target mostly the top of the plant and leaves, and product often doesn't make it into the canopy. 360 UNDERCOVER makes in-canopy application possible. Use 360 UNDERCOVER in corn, seed corn, soybeans, wheat, cotton, sugar beets, and more.

⊕ DON'T LET DISEASE WIN

White mold, bacterial blights, spider mites and soybean aphids can have a strong negative impact on plant health and yield potential, so it's important to closely monitor these diseases and pests throughout the development of your corn and soybeans. Get more precise coverage to target these pests under the canopy with 360 UNDERCOVER.

⊕ 360 UNDERCOVER BOOSTS YIELDS

* Full Program: 105 lbs broadcast 32% applied, 65 lbs N applied via 360 Y-DROP, 70 lbs N applied via 360 Y-DROP, and fungicide applied via 360 UNDERCOVER

360 UNDERCOVER 120

⊕ TAKE YOUR PLANT HEALTH APPLICATION TO GREATER LENGTHS

The new 360 UNDERCOVER 120 extends the benefits of the in-canopy application system to the full width of the boom. Lightweight risers and nozzle manifolds allow for full 100- or 120-foot coverage for improved productivity. An integrated breakaway system protects the system from ground contact. And 360 UNDERCOVER 120 adds a fifth nozzle position which is ideal for ground-directed spraying in cotton and soybeans. You can add 360 UNDERCOVER 120 to your traditional 360 Y-DROP/360 UNDERCOVER system on the center boom sections, or equip the full width of the boom with new, foldaway system.

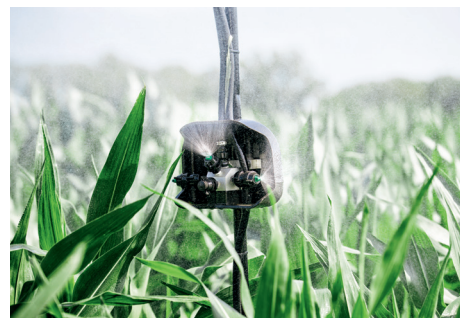

No need to remove the 360 UNDERCOVER 120 system for traditional applications. Use the optional electric actuators to fold 360 UNDERCOVER 120 up and out of the way. The system does not interfere with normal boom folding.

360 UNDERCOVER 120 has been successfully tested in 15" rows and wider of soybeans. Its 5 nozzle system is ideal for a variety of crops including cotton, corn, wheat, and soybeans.

⊕ 360 UNDERCOVER 120 KEY FEATURES

- Lightweight design allows drops to extend the full width of the boom
- Electric actuators allow drops to be folded into the boom from the cab.
- 5-nozzle applicator enables application down into the canopy.
- Breakaway provides drop protection while still fighting through tangled crops.
- Can be left on the boom during other spray applications

KEY FEATURES

Easy add-on to 360 Y-DROP system – slides up and down the riser for vertical in-canopy positioning depending on crop growth stage.

Up to four multi directional spray nozzles on each unit for customized spray patterns and 150-degree horizontal spray application.

Special shell design protects nozzles and moves smoothly under crop canopy.
